Constellium to Source Local Renewable Energy for its German Facilities

Paris – Constellium SE (NYSE: CSTM) today announced that its extrusion and automotive structures plants in Gottmadingen and Singen, Germany, will source locally produced solar electricity under a long-term Power Purchase Agreement (PPA) with the community of Gottmadingen.

Under the agreement, Constellium will receive the full electricity output of the *Katzental* solar park over a 10-year period, produced locally in the immediate vicinity of the Gottmadingen and Singen plants.

The electricity will be used exclusively by Constellium's Gottmadingen and Singen extrusion and automotive structures plants, covering over 25% of the plants' combined total needs. The agreement is expected to avoid approximately 3,500 metric tons of CO_2 emissions per year[1].

"This initiative is an important step in our efforts to reduce our environmental footprint, strengthen the energy resilience of our operations, and support our long-term competitiveness in Germany," said Stéphane Corre, President of Constellium's Automotive Structures and Industry business unit. "By sourcing renewable electricity produced directly in the region, we are strengthening our offering of low-carbon solutions to our customers."

Deliveries from *Katzental* solar park to Constellium are planned from spring 2027, following the installation of the electrical infrastructure required for direct supply to Constellium.
